## NeoColab\_REC\_CS23231\_DATA STRUCTURES

### REC\_DS using C\_Week 2\_COD\_Question 1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

**Input Format**

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

### ***Output Format***

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: a b c -

Output: Forward Playlist: a b c

Backward Playlist: c b a

### ***Answer***

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    char item;  
    struct Node* next;  
    struct Node* prev;  
};
```

```
struct Node*tail=NULL;
```

```
void insertAtEnd(struct Node**head,char item){  
    struct Node*newnode=(struct Node*)malloc(sizeof(struct Node));  
    newnode->item=item;  
    newnode->next=NULL;  
    newnode->prev=NULL;  
    if(*head==NULL){  
        *head=tail=newnode;  
    }  
    else{
```

```

        tail->next=newnode;
        newnode->prev=tail;
        tail=newnode;
    }
}

void displayForward(struct Node*head){
    struct Node*temp=head;
    while(temp!=NULL){
        printf("%c ",temp->item);
        temp=temp->next;
    }
    printf("\n");
}

void displayBackward(struct Node* tail){
    struct Node*temp=tail;
    while(temp!=NULL){
        printf("%c ",temp->item);
        temp=temp->prev;
    }
    printf("\n");
}

void freePlaylist(struct Node*head){
    struct Node* temp=head;
    while(temp!=NULL){
        struct Node*nextnode=temp->next;
        free(temp);
        temp=nextnode;
    }
    head=NULL;
    tail=NULL;
}

int main() {
    struct Node* playlist = NULL;
    char item;

    while (1) {
        scanf(" %c", &item);
        if (item == '-') {
            break;
        }
        insertAtEnd(&playlist, item);
    }
}

```

```
struct Node* tail = playlist;  
while (tail->next != NULL) {  
    tail = tail->next;  
}
```

```
printf("Forward Playlist: ");  
displayForward(playlist);
```

```
printf("Backward Playlist: ");  
displayBackward(tail);
```

```
freePlaylist(playlist);
```

```
return 0;
```

**Status :** Correct

**Marks :** 10/10
